Emergency procedures : Do not smoke. Ventilate area. Do not breathe vapours.

###### 6.1.2. For emergency responders

Protective equipment : Equip rescue crew with proper protection.  
Emergency procedures : No smoking. Ventilate area. Do not breathe vapours.

##### 6.2. Environmental precautions

Prevent entry to sewers and public waters. Notify authorities if product enters sewers or public waters.

##### 6.3. Methods and material for containment and cleaning up

Methods for cleaning up : Contain and collect spillage with non-combustible absorbent materials, e.g. sand, earth, vermiculite, diatomaceous earth and place in container for disposal according to local regulations (see section 13).  
Other information : Clean preferably with a detergent - avoid use of solvents.

##### 6.4. Reference to other sections

See Section 7 for information on safe handling. See Section 8 for information on personal protection equipment. See Section 13 for disposal information.

#### SECTION 7: Handling and storage

##### 7.1. Precautions for safe handling

Precautions for safe handling : Keep container tightly closed. Avoid contact with skin and eyes. Avoid inhalation of vapour and spray mist. Never use pressure to empty : container is not a pressure vessel. Always keep in containers of same material as the original one. For personal protection see Section 8. Comply with the health and safety at work laws.  
Hygiene measures : Smoking, eating and drinking should be prohibited in application area.

##### 7.2. Conditions for safe storage, including any incompatibilities

Storage conditions : Store in accordance with local/national regulations.  
Storage temperature : 5 - 30 °C Store in a dry, well ventilated place away from sources of heat, ignition and direct sunlight  
Prohibitions on mixed storage : Store separately from oxidising agents and strongly alkaline and strongly acidic materials.  
Storage area : Prevent unauthorised access.  
Special rules on packaging : Containers which are opened must be carefully resealed and kept upright to prevent leakage.

##### 7.3. Specific end use(s)

No additional information available

#### SECTION 8: Exposure controls/personal protection

##### 8.1. Control parameters

No additional information available

##### 8.2. Exposure controls

###### Appropriate engineering controls:

Provide adequate ventilation. Where reasonably practicable this should be achieved by the use of local exhaust ventilation and good general extraction. If these are not sufficient to maintain concentrations of particulates and solvent vapour below the OEL, suitable respiratory protection must be worn.

###### Personal protective equipment:

Protective goggles. Gloves. In case of inadequate ventilation wear respiratory protection.

###### Hand protection:

There is no one glove material or combination of materials that will give unlimited resistance to any individual or combination of chemicals. For prolonged contact, use rubber or neoprene gloves. The breakthrough time must be greater than the end use time of the product. The instructions and information provided by the glove manufacturer on use, storage, maintenance and replacement must be followed. Gloves should be replaced regularly and if there is any sign of damage to the glove material. Always ensure that gloves are free from defects and that they are stored and used correctly. The performance or effectiveness of the glove may be reduced by physical/ chemical damage and poor maintenance. Barrier creams may help to protect the exposed areas of the skin, they should however not be applied once exposure has occurred
